

EMSYS IM- Management of Investments

Designed for:

Supports the investments processes starting from initiating the concept, planning, budgeting, financing, and execution until to the run into functioning of objectives, having as purpose maximizing performance in relationship with clients, shareholders and employees by an efficient management of the involved resources.

EMSYS IM addresses a complete and complex objectives portfolio:

- Equity investments by fixed assets manufacturing and procurement;
- Equity investments managed by projects;
- Investments in research and development;
- Financial Investments;
- General interest projects such as human resources competences developing (employee education) or new marketing strategies (establishing new markets).

The investment program is in close correlation with the modernization and renewal program of assets to continue the services and products delivery and with the objective of organization developing and increasing profit. Financing the investments program is achieved by allocating the available funds identified by analysis and financial management instruments, for instance cash flow previsions.

Planning investments is a continuous and dynamic process, by staging resources and achievements for the first five years, taking into account the previous values and previsioning the lately global values. Budgeting collects investments objectives data on funds and organizational structures and integrates them into the organizations' budgets system:

- Invitational
- Maintenance
- Operational

Such an approach allows the control and investments' progress estimation, of costs and resources, diminishes risks, by realizing a balance between the expected effects and allocate resources on the entire investment cycle, with minimal returns.

Heterogeneity and uniqueness of the investment objectives require delivery through projects, internal orders or purchases of fixed assets. In this purpose EMSYS IM integrates itself with functionalities from the Project Management, Procurement, Cost Control, Production, Human Resources Management, and Financial Management. Finalized investments are automatically taken over in the fixed assets accounting.

EMSYS IM achieved the pass from a traditional approach of decisions and consumption of investments resources by a management system coordinates decisions for optimum synchronization with business strategy of the organization.
